UX Design Diploma: Project 9

# Interaction Desktop Design

## *Hotel Track*

### *Desktop*

*By Kathryn Wheeler*

# Objective

- In this project you'll sketch the screens for the booking process. The sketches should be based on the key issues identified in your customer journey map and flow diagram.

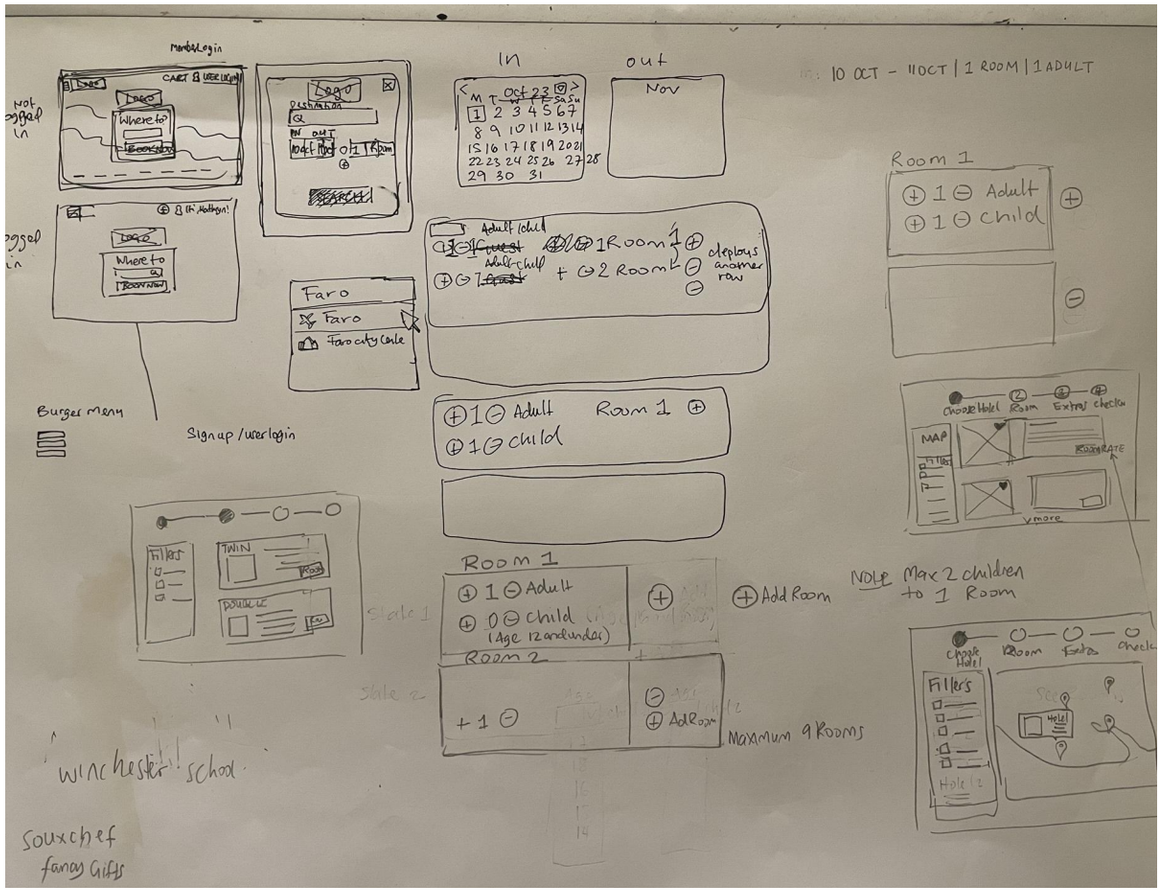

# Tasks

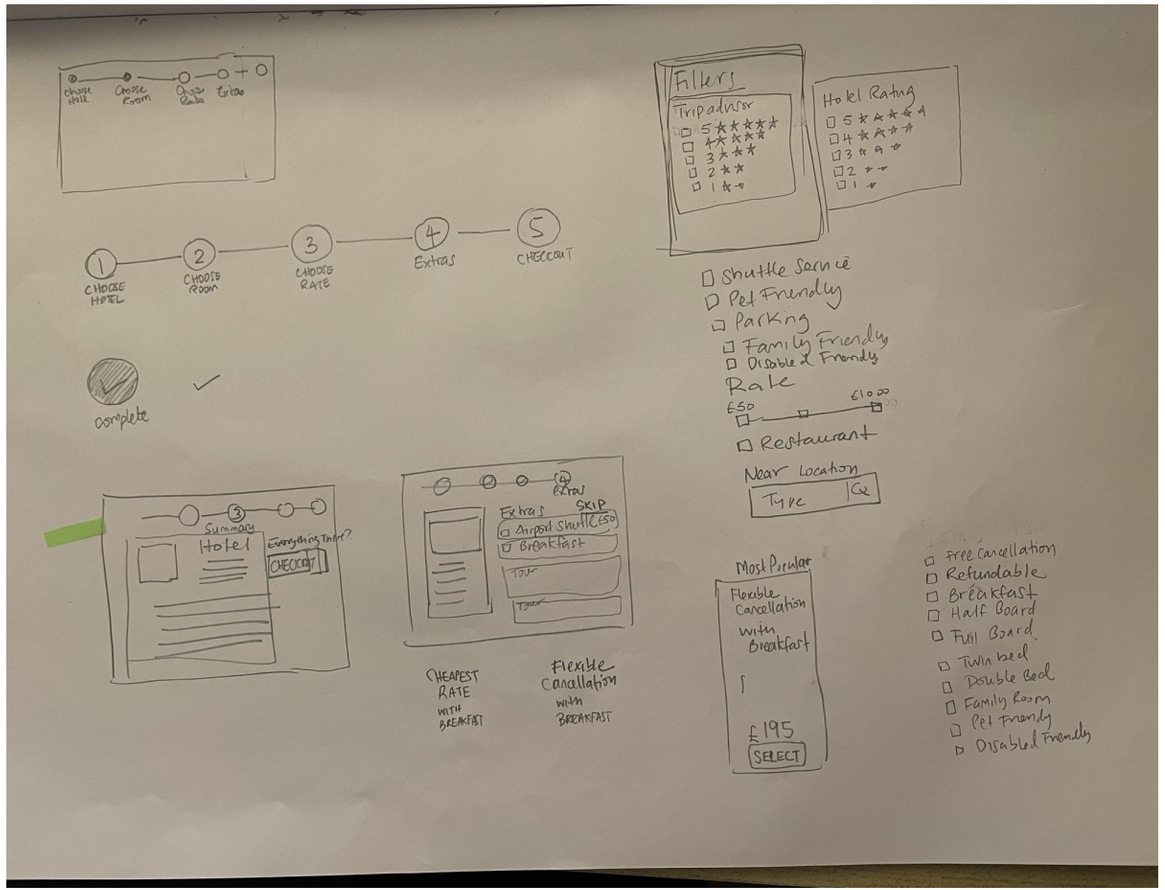

- ❑ **Review your flow diagram**
  Refer to the flow diagram and create a list of the screens to be designed.

- ❑ **Sketch each screen**
  Using pen and paper, sketch the screens from the homepage up to and including the booking summary. You don’t need to detail the payment screen, but you can if you wish.

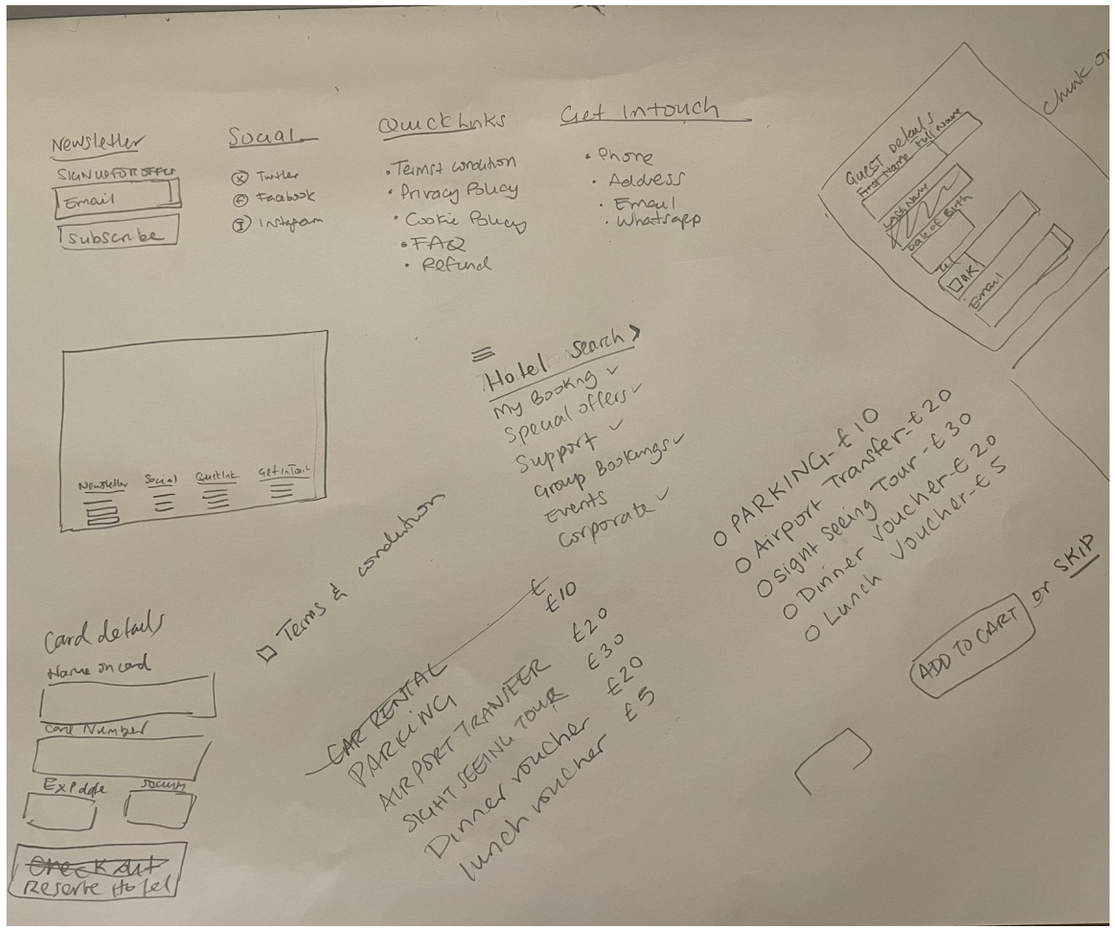

- ❑ **Take photos of your final sketches**
  You’ll need to submit them for the project, and they’re also valuable to have for your portfolio.

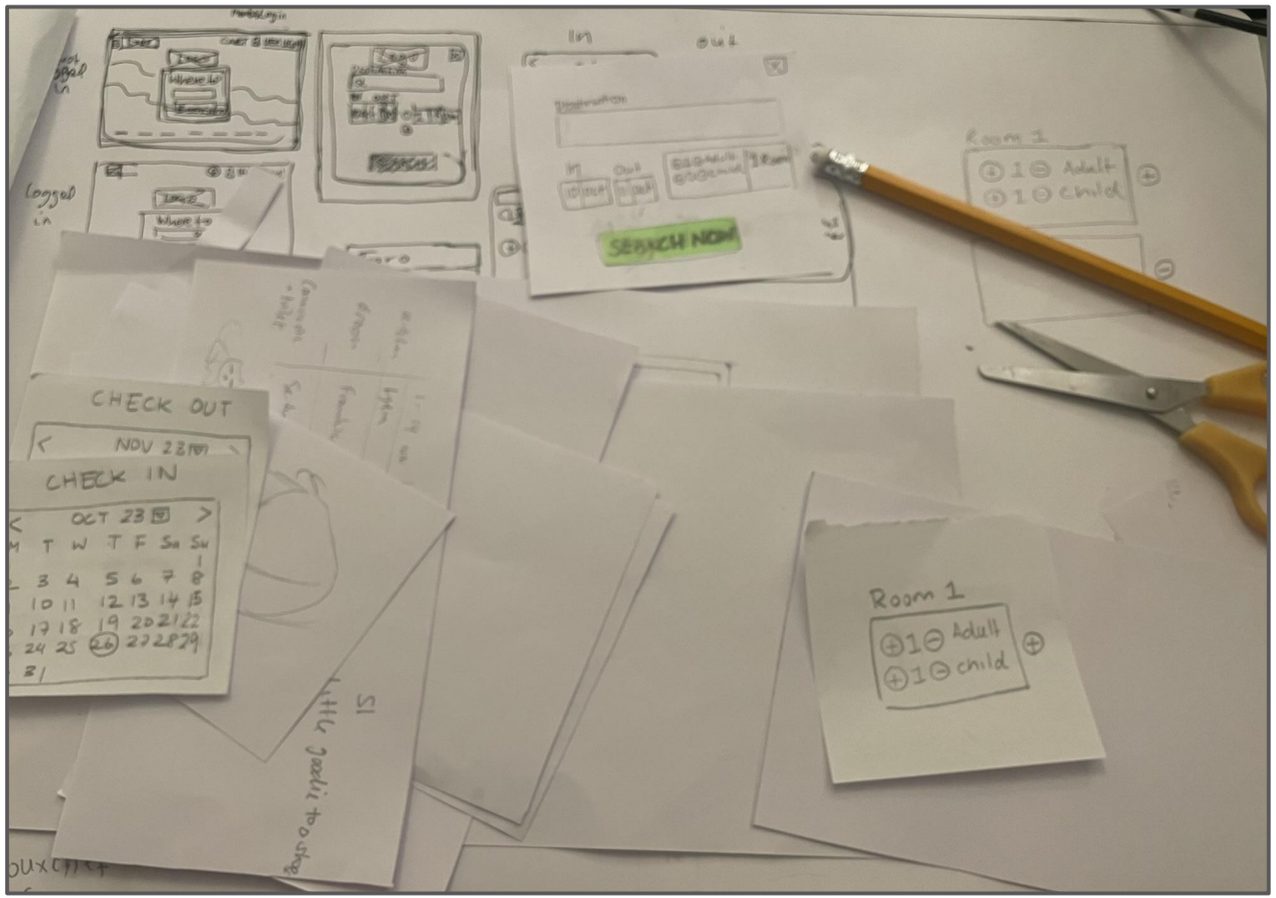

# Work in Progress Sketches

# Home Page

Currency defaults to current location

Hamburger Menu (Deployed)

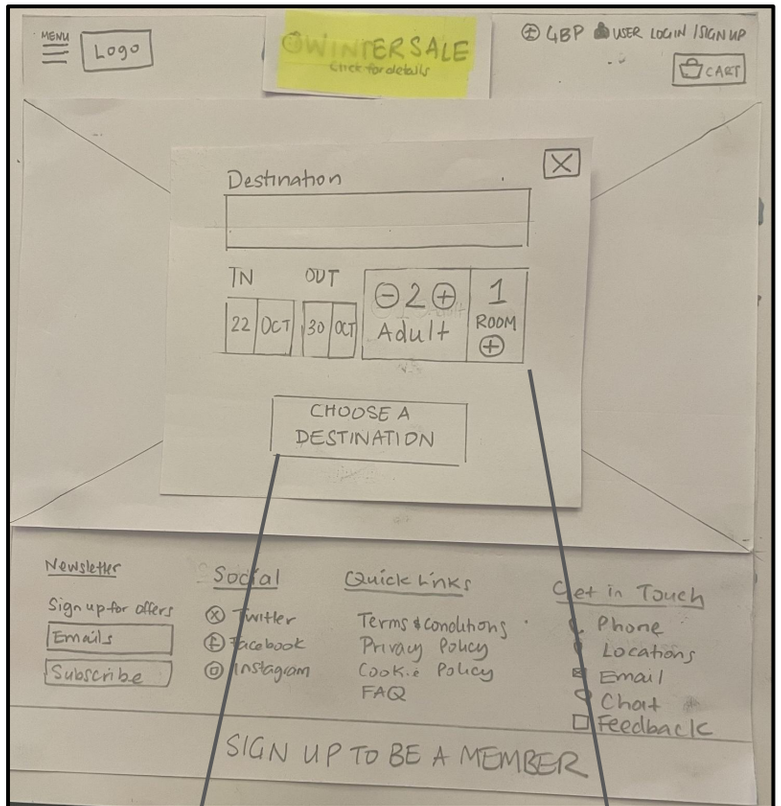

If user is logged in they see a personalised greeting

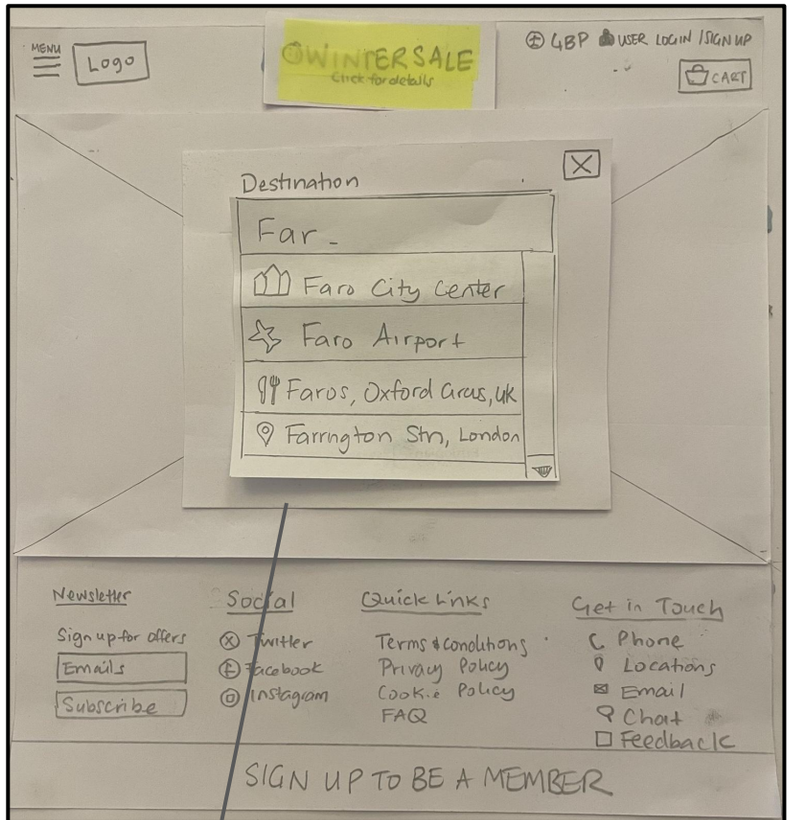

Centred search box to bring attention to the search box / search engine. Clicking this area deploys the actual Search Engine.

## Search Engine - Enter destination

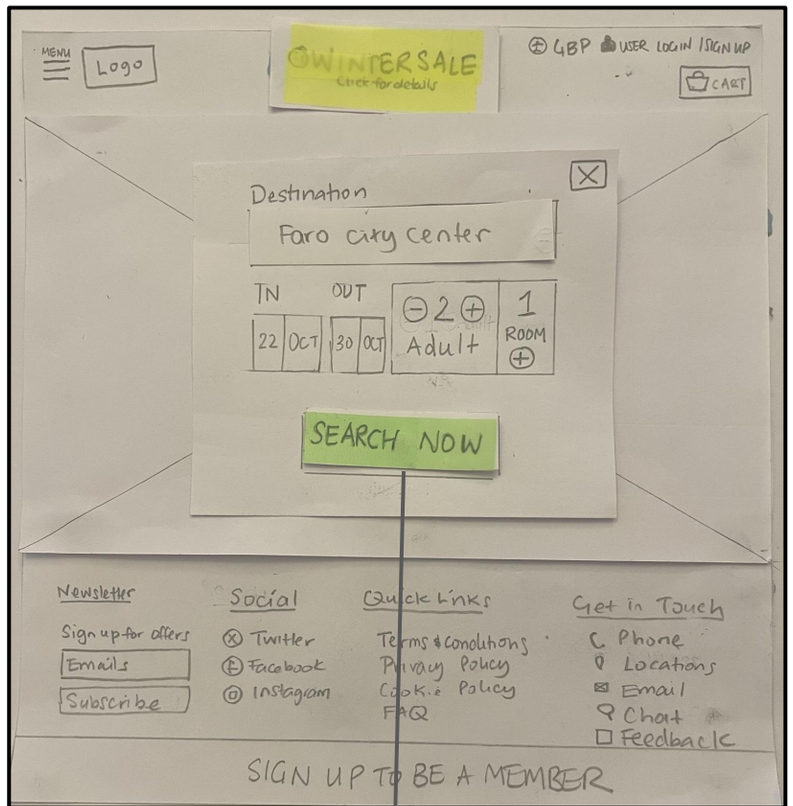

'Choose a Destination' button is not clickable until a destination is chosen

Dates and Rooms are set to 1 month in future default and 2 guest / 1 room default

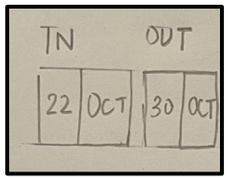

Destination search deploys drop-down when clicked with intelligent suggestions as user types.

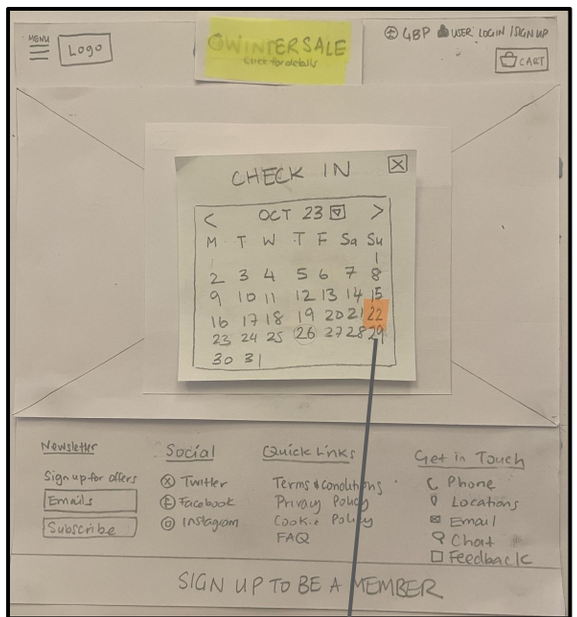

Once a destination is filled, 'Choose a Destination Button' becomes 'Search now' Highlighted and inviting.

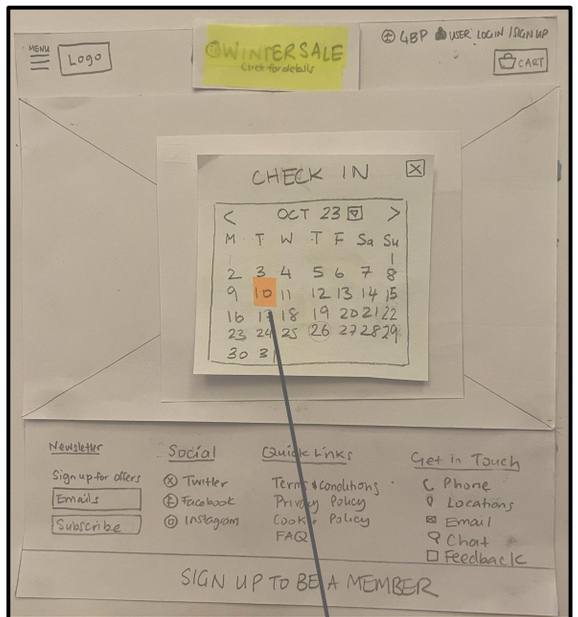

# Search Engine - Enter Date

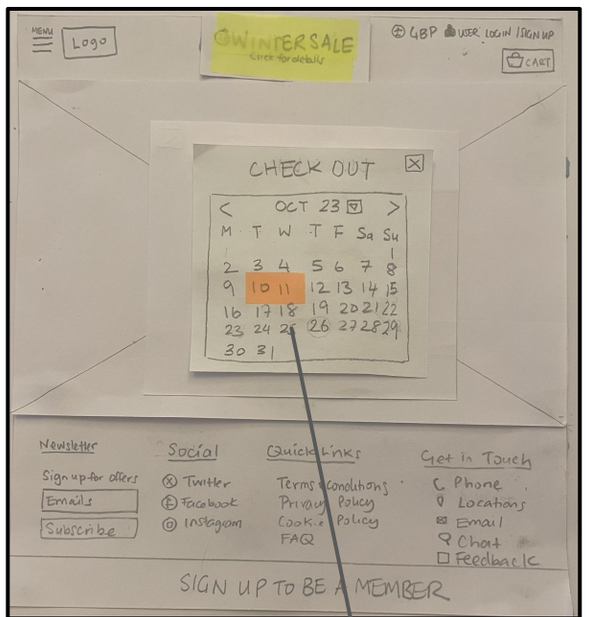

If user chooses to change the date. They click the date picker (any area of the datepicker deploys below)

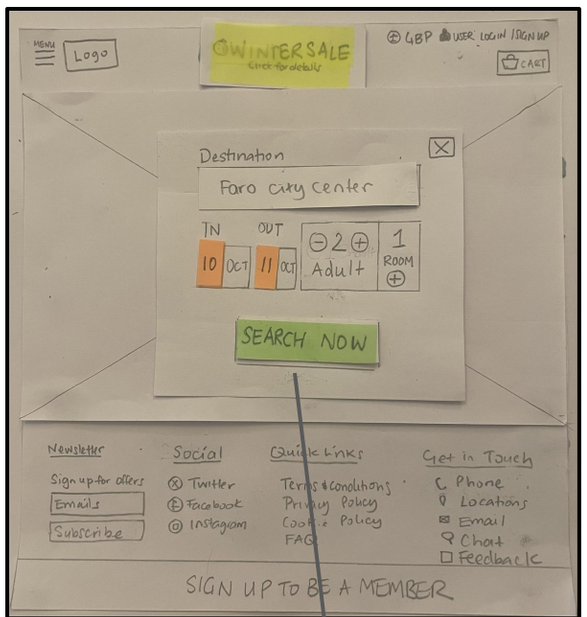

Highlights the default date there

User chooses new date. Date clicker moves automatically to check out date

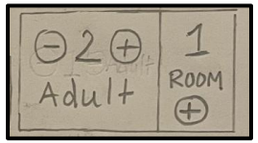

Checkout date includes check-in date to show user both check in and check out date. Once user clicks checkout date, calendar auto closes.

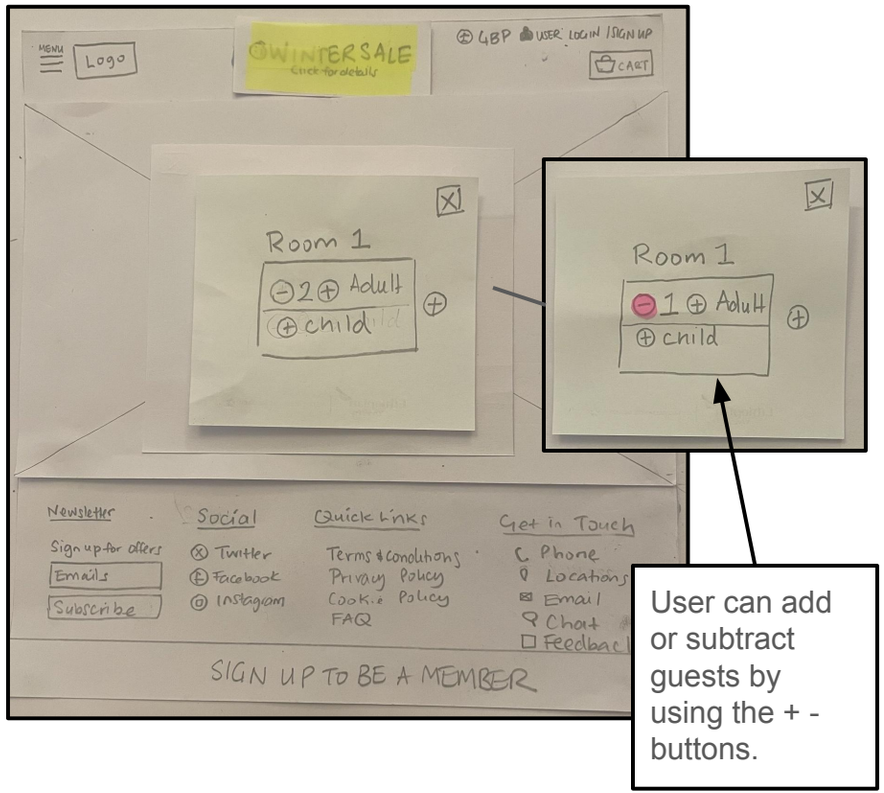

User sees their destination and new newly selected dates.

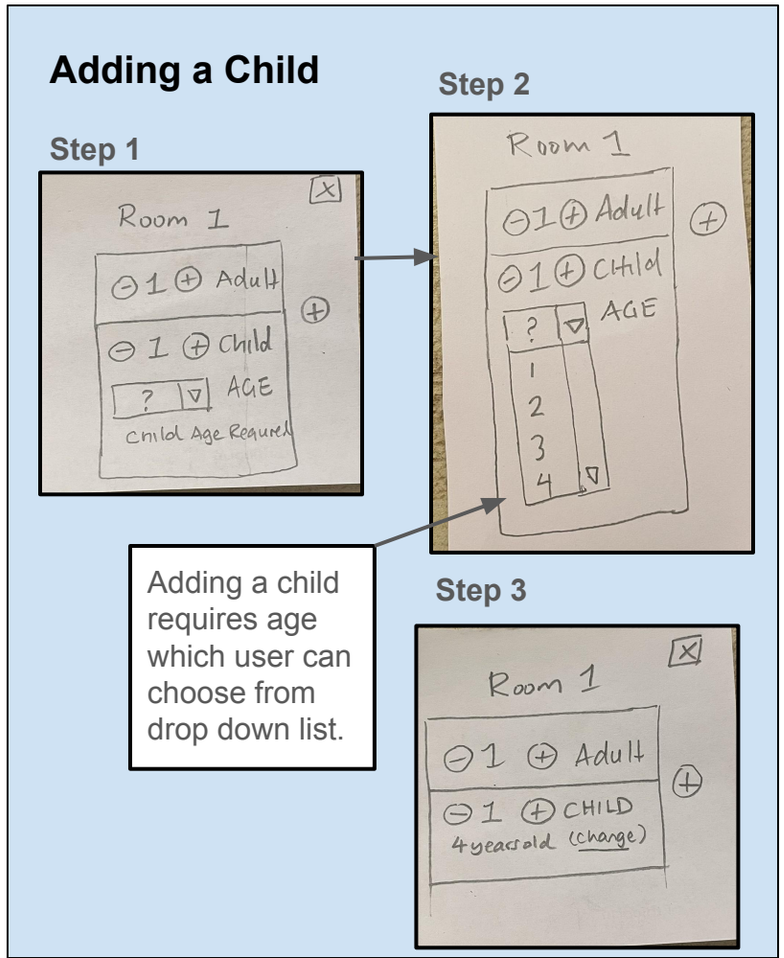

# Search Engine - Search Engine - Enter Room / Guest

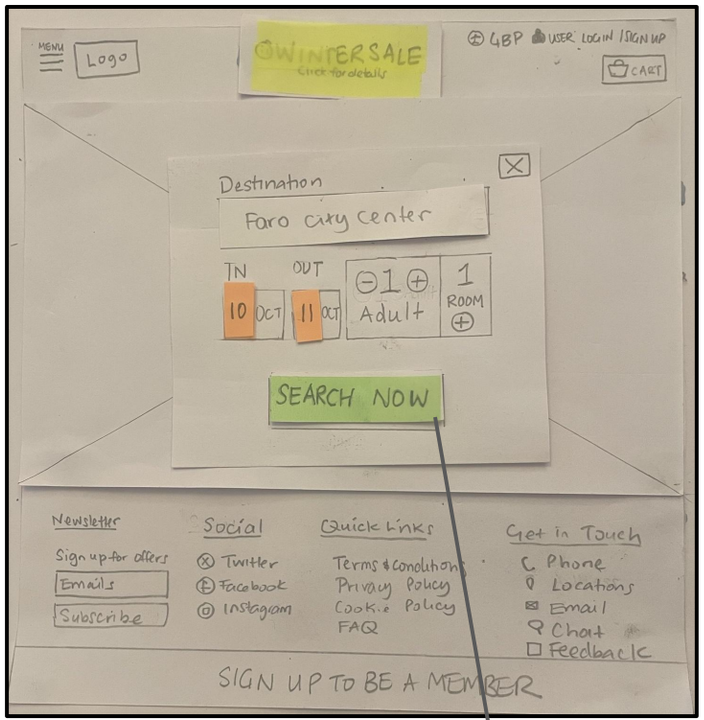

If user chooses to change the Guest Number and Room Number. They click the roompicker (any area of the room picker deploys below)

User can add or subtract guests by using the + - buttons.

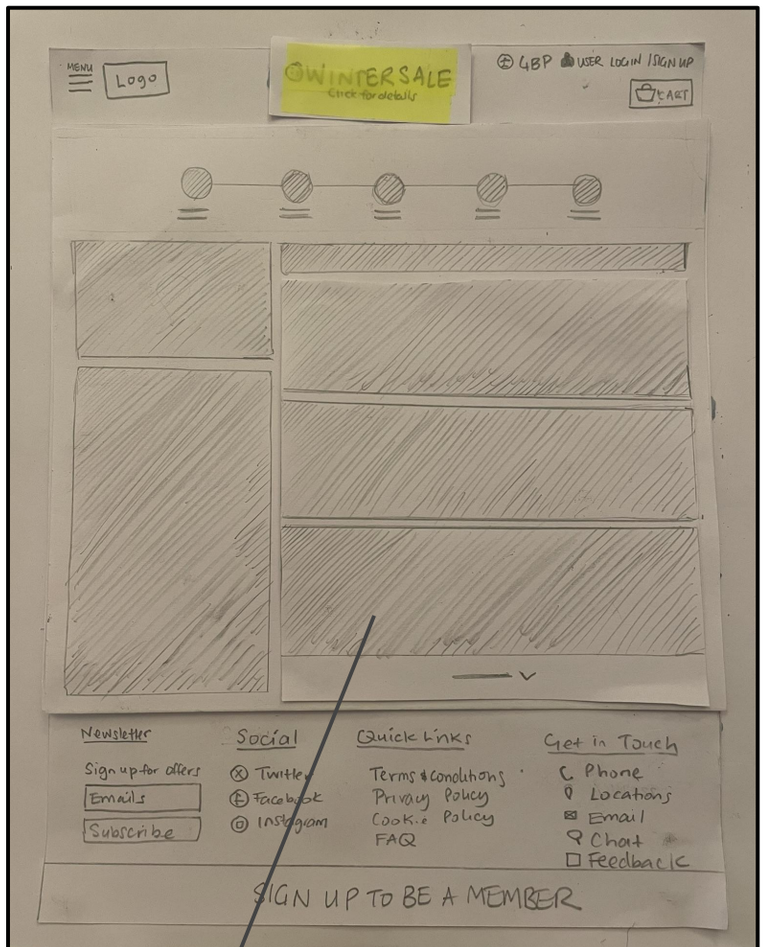

Adding a child requires age which user can choose from drop down list.

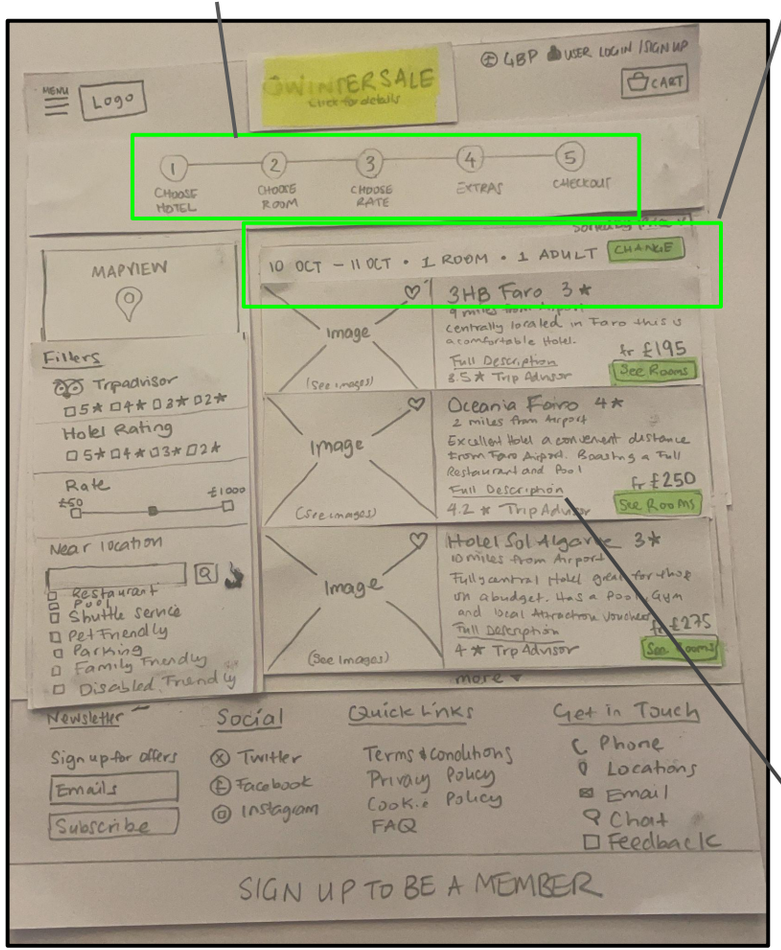

User sees their destination, dates and adjusted room / guest quota

# Hotel Results - List View

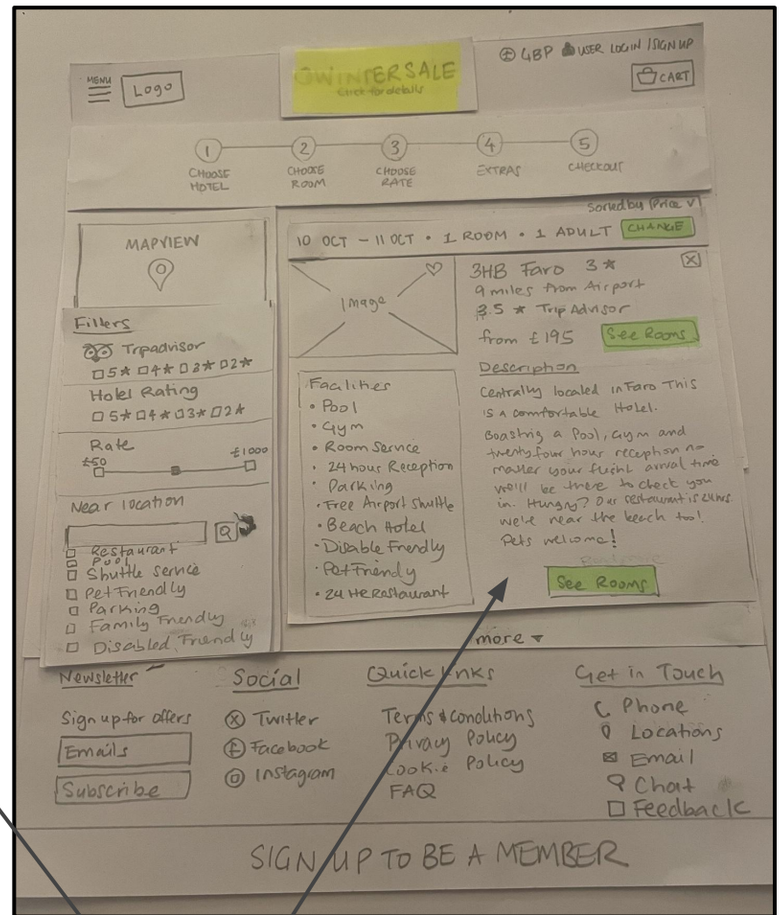

Skeleton State

Progress Bar

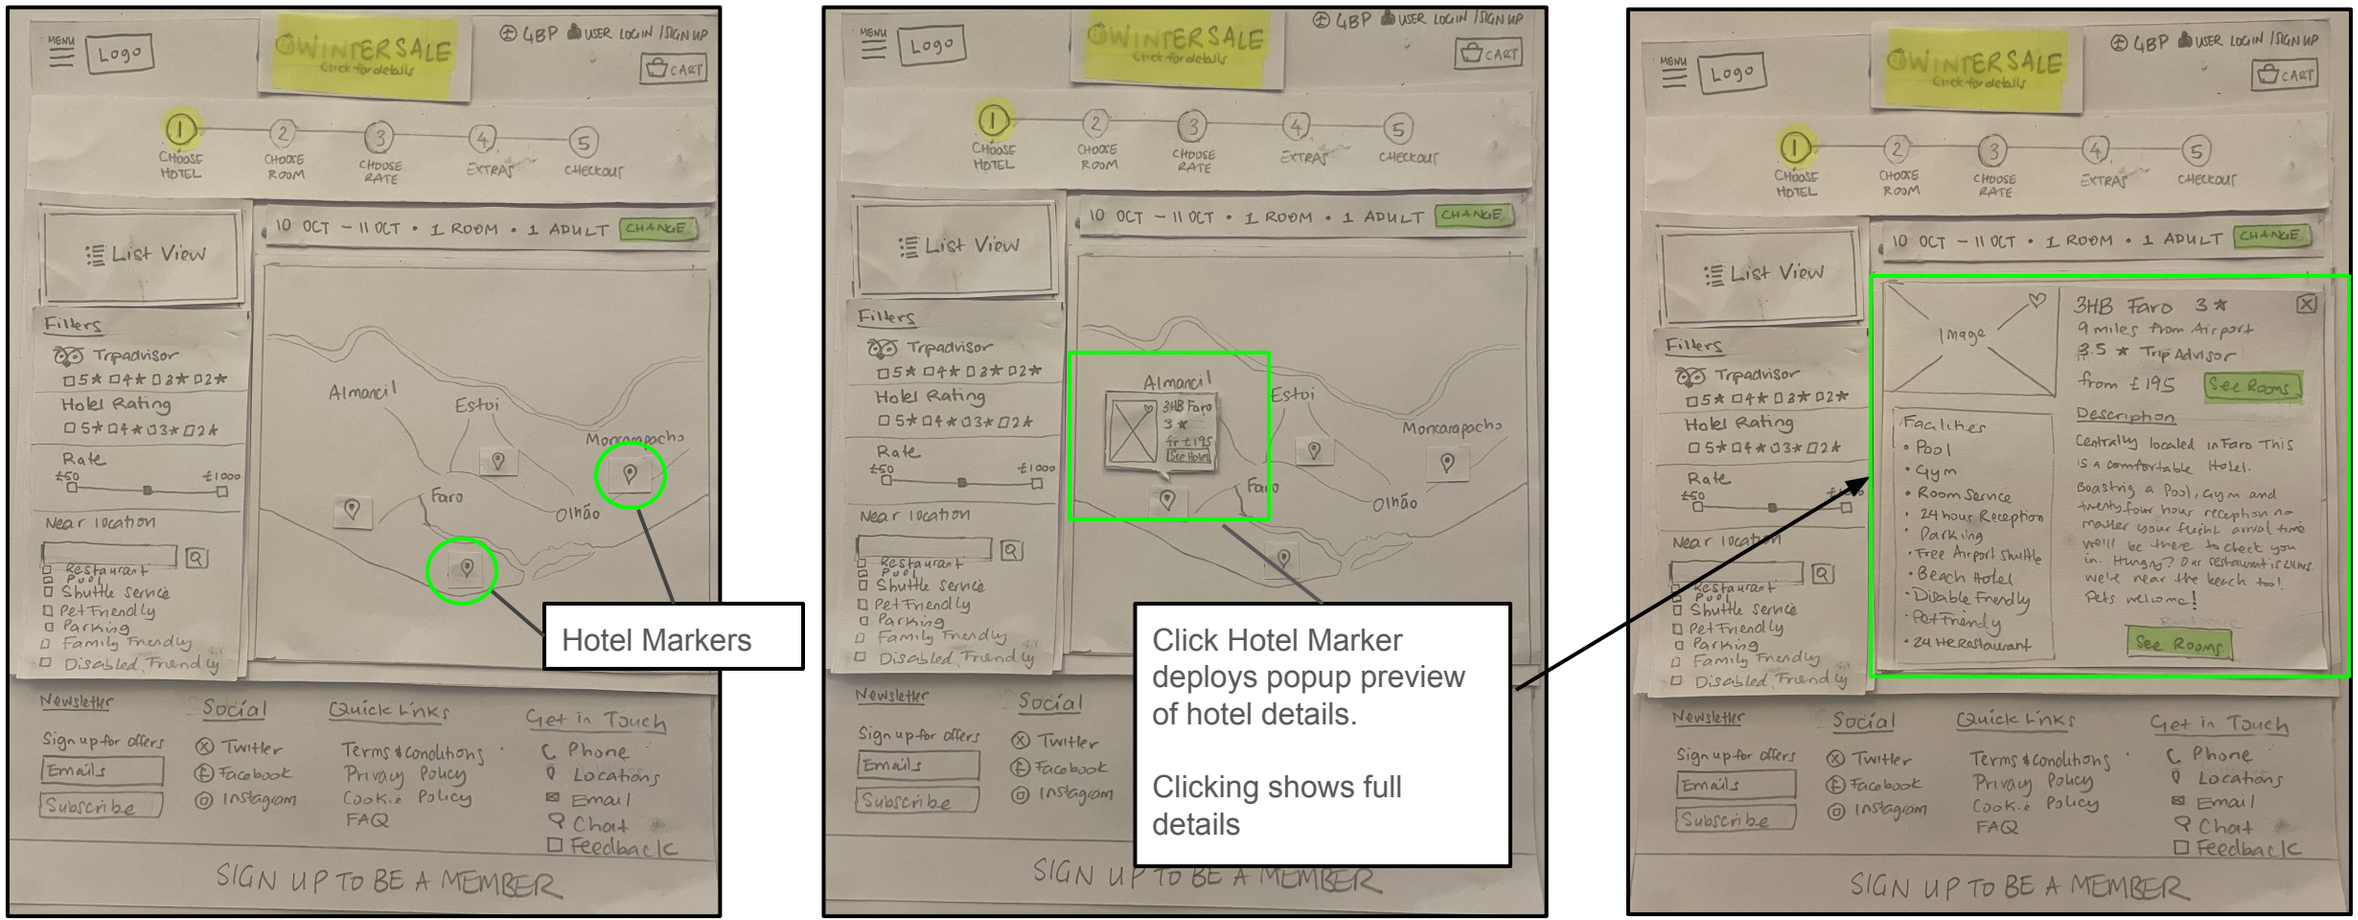

Progress summary at top of results

Clicking Full Description deploys full info of the hotel

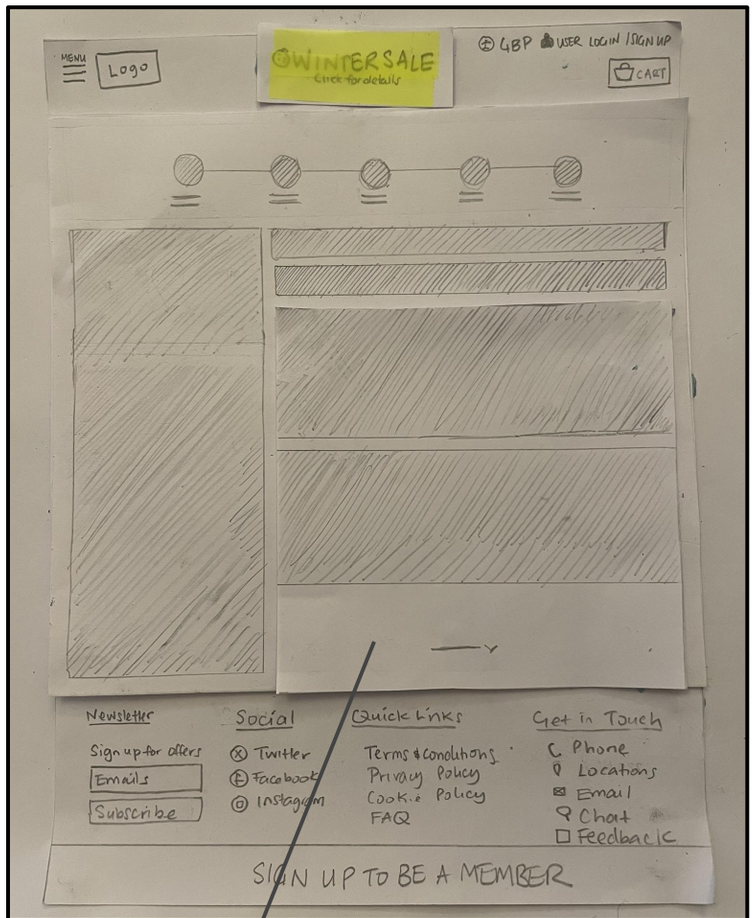

# Hotel Results - Map View

If user chooses to change to view the hotel listing by map view.

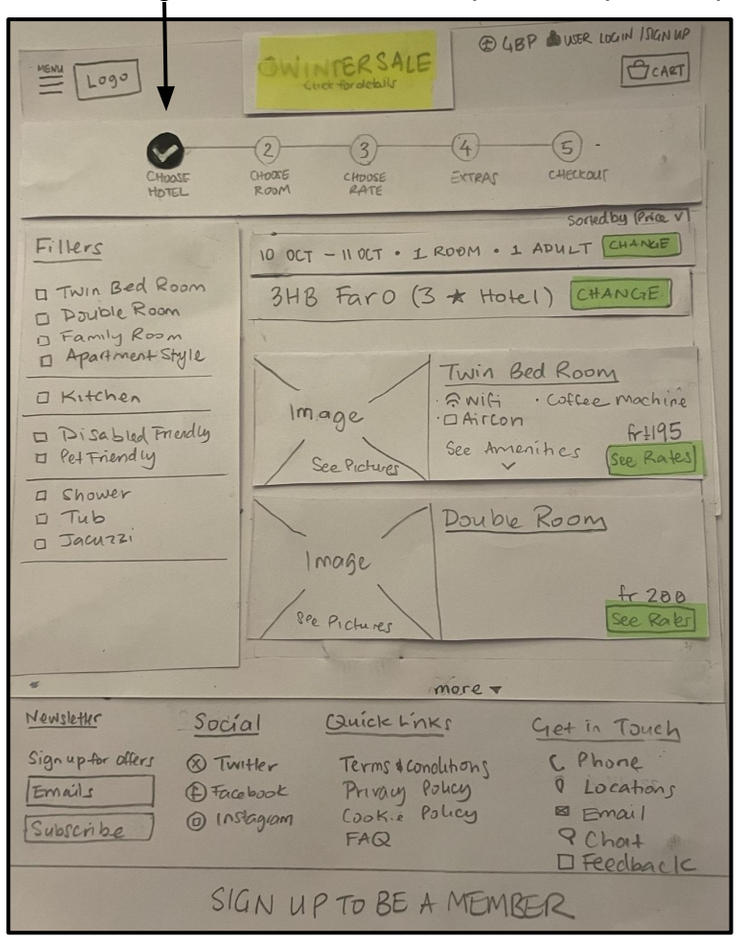

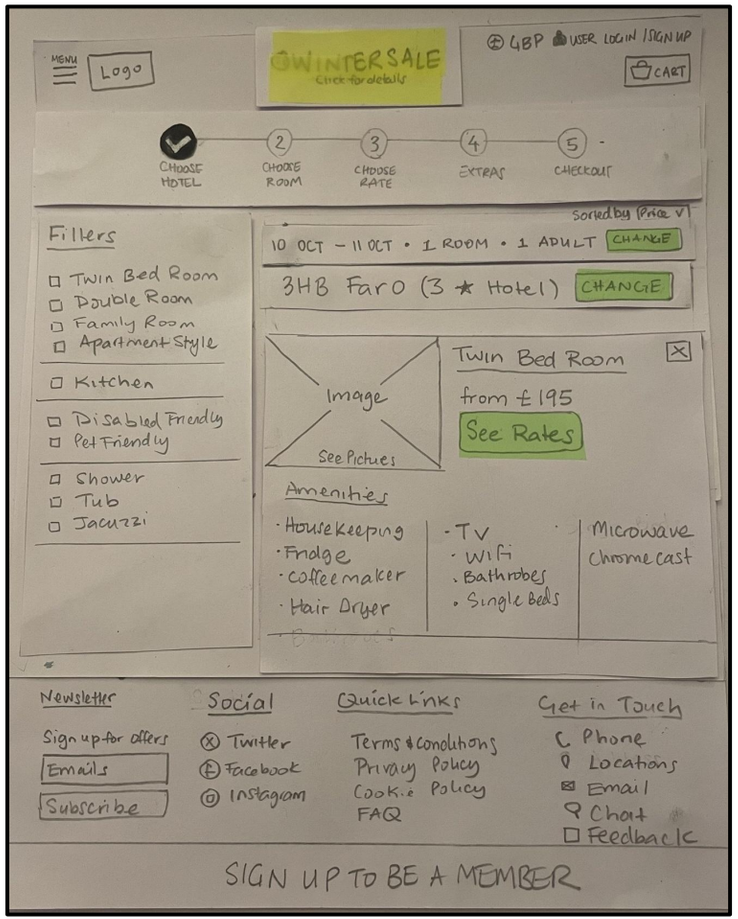

## Room Results

Progress bar shows a completed step of the progress with a tick.
